Attachments: %Massique et Demantelement_G114.pdf

Hi Corentin,

Sorry to be late

Siemens Gamesa is not able to provide the setup of the Dino Tails on the SG122 2.1 at this stage. Developments will go on, project related, specifically for bigger quantities of Wind Turbines. In case of this kind of technology will be available for the SG122 2.1 the noise level of the wind turbine is expected to be - 2 dB(A) compared to the standard blades without Dino Tails.

Dismantling costs we have available for SG2.0-114 only right now, which are attached, which shouldn't differ too much from SG2.1-122.
Hopefully you are able to use it.

Any questions left, please let me know

With best regards,
Edwin van der Voort
